

CONTENTS

	Page		Page
Summary.....	1	Application of theory and discussion of results.....	23
Introduction.....	3	Determination of the oxygen equilibrium and the rate constants.....	23
Survey of previous work.....	4	Influence of particle size.....	23
Carbon dioxide-coke reactions.....	10	Influence of inert gas.....	23
Experimental procedure and results.....	10	Influence of space velocity.....	24
Theoretical development.....	13	Water-gas shift equilibrium.....	25
Application of theory and discussion of results.....	14	Comparison of steam-coke and carbon dioxide-coke data.....	28
Determination of the oxygen equilibrium and the rate constants.....	14	Reactions of carbon dioxide-steam mixtures.....	29
Influence of particle size.....	15	Reactions of hydrogen-steam mixtures.....	31
Influence of inert gas.....	15	Reactions of carbon monoxide-steam mixtures.....	33
Influence of space velocity.....	15	The effect of macroporosity of coke on gasification rates.....	35
Comparison of coke data with data of relatively pure carbons.....	17	Conclusions.....	37
Steam-coke reactions.....	19		
Experimental procedure and results.....	19		
Theoretical development.....	22		

ILLUSTRATIONS

Figure			Page
1. Apparatus.....			10
2. Gas flowmeter.....			11
3. Reaction of carbon dioxide with a metallurgical coke.....			14
4. Determination of the parameters of the reactions of carbon dioxide with a metallurgical coke.....			16
5. Effect of inlet partial pressure of carbon dioxide on fraction of carbon dioxide decomposed at constant flow rate of carbon dioxide.....			17
6. Equilibrium constant of the oxygen exchange reaction over coke between carbon dioxide and carbon monoxide as a function of temperature.....			17
7. The constants of the gasification step as a function of temperature.....			18
8. Precision water injection system.....			19
9. Reaction of steam with a metallurgical coke.....			24
10. Graphical representation of equation (40).....			25
11. Determination of the parameters of the reaction of steam with a metallurgical coke.....			26
12. Variation of hydrogen-to-steam ratio with total carbon gasified.....			27
13. Relation of rate of gasification to weight of carbon and steam flow rate.....			27
14. Effect of partial pressure of steam on fraction of steam decomposed at constant flow rate steam.....			27
15. Attainment of water-gas shift equilibrium as a function of the fraction of steam reacted.....			28
16. Equilibrium constant of the oxygen exchange reaction over coke between steam and hydrogen as a function of temperature.....			28
17. Constants of the gasification step as a function of temperature.....			28
18. Effect of carbon dioxide on reaction of steam with coke.....			29
19. Decrease in steam conversion with addition of carbon dioxide.....			29
20. Effect of carbon dioxide addition on total gasification of coke.....			30
21. Increase in total gasification with addition of carbon dioxide.....			30
22. Outlet gas composition as a function of carbon dioxide-to-steam ratio at inlet.....			31
23. Effect of hydrogen on reaction of steam with coke.....			31
24. Decrease in steam conversion with addition of hydrogen.....			31
25. Effect of hydrogen on gasification of coke with steam.....			32
26. Decrease in gasification with addition of hydrogen.....			32
27. Outlet gas composition as a function of hydrogen-to-steam ratio at inlet.....			32
28. Effect of carbon monoxide on reaction of steam with coke.....			33
29. Change in steam conversion with addition of carbon monoxide.....			33
30. Effect of carbon monoxide on gasification of coke with steam.....			34

IV KINETICS OF THE REACTIONS OF CARBON DIOXIDE AND STEAM WITH COKE

Figure	Page
31. Decrease in gasification with addition of carbon monoxide.....	35
32. Outlet gas composition as a function of carbon monoxide-to-steam ratio at inlet.....	35
33. Decrease in steam conversion and gasification rate with addition of hydrogen or carbon monoxide.....	35
34. Graphical determination of pore size distribution.....	35

TABLES

1. Reaction of carbon dioxide with a high-temperature metallurgical coke.....	11
2. Influence of inert gas on the reaction of carbon dioxide with a high-temperature metallurgical coke.....	13
3. Reaction of steam with a high-temperature metallurgical coke.....	20
4. Influence of nitrogen on the reaction of steam with a high-temperature metallurgical coke.....	25
5. Reaction of steam-carbon dioxide mixtures with a high-temperature metallurgical coke at 1,100° C.....	30
6. Reaction of steam-hydrogen mixtures with a high-temperature metallurgical coke at 1,100° C.....	32
7. Reaction of steam-carbon monoxide mixtures with a high-temperature metallurgical coke at 1,100° C.....	34
