TRANSLATIONS OF GERMAN DOCUMENTS ON THE DEVELOPMENT OF

IRON CATALYSTS FOR THE FISCHER-TROPSCH SYNTHESIS <sup>1/</sup> 11

By Max Leva <sup>2/</sup>

CONTENTS

	<u>Page</u>
Foreword.....	xi
TOM Reel 101 Doc. FG-21559-NID, "Report On The Middle-Pressure Synthesis With Iron Catalysts, June 1940".....	1
Introduction.....	1
I. The Catalyst.....	2
A. Precipitation of Catalyst.....	2
1. Starting material.....	3
2. Precipitation with sodium carbonate.....	3
3. Precipitation with ammonia.....	4
4. The addition of kieselguhr.....	5
B. Pretreatment of the Catalyst.....	5
1. Induction with CO-H <sub>2</sub> mixture during the synthesis.....	5
a. Mixed gas and atmospheric pressure.....	5
b. CO-rich gas and atmospheric pressure.....	5
c. CO-rich gas and elevated pressure.....	6
2. Induction with CO and H <sub>2</sub> mixtures in a process separate from that of the synthesis.....	7

<sup>1/</sup> The Bureau of Mines will welcome reprinting this paper, provided the following acknowledgment is used: "Reprinted from Bureau of Mines Information Circular \_\_\_\_\_"

<sup>2/</sup> Chemical engineer, Research and Development Division, Bureau of Mines, Central Experiment Station, Pittsburgh, Pa.

	<u>Page</u>
a. Induction at various pressures and synthesis at ordinary pressure.....	7
b. Induction at ordinary pressure and synthesis at elevated pressure.....	7
c. Induction at reduced pressure and various temperatures, synthesis at elevated pressure.....	9
d. Influence of the induction pressure upon the synthesis at elevated pressure (induction temperature, 325°C.).....	10
3. Induction with CO.....	10
a. Influence of the induction temperature at 1/10 atmosphere pressure.....	11
b. Influence of induction pressure.....	13
c. Induction time.....	13
d. Mixture of CO with other gases.....	15
4. Theory of Induction Process.....	15
II. The Synthesis.....	17
A. The Synthesis Gas.....	17
B. The Synthesis Pressure.....	20
C. The Reaction Temperature.....	23
1. Influence of Induction.....	24
2. Influence of Gas Composition.....	25
3. Effect of Too Low Starting Temperature.....	26
4. Temperature and Reaction Products.....	26
D. The Influence of Alkali Contents of an Iron Catalyst Upon Its Activity and Upon the Nature of the Reaction Products.....	27
E. Treatment with Hydrogen Before and After the Synthesis.....	29
1. Pretreatment with Hydrogen.....	29

	<u>Page</u>
2. Hydrogen Treatment Between Induction and Synthesis.....	29
3. Hydrogen Treatment During the Synthesis.....	29
F. Catalysts Based on Ferrous Salts.....	30
G. The Influence of the Addition of Copper.....	31
H. The Effect of the Addition of Kieselguhr.....	32
III. The Reaction Products.....	34
A. Liquid Hydrocarbons.....	35
B. Paraffin.....	37
C. Gasol.....	38
D. Oxygen-containing Products.....	39
1. The Reaction Water.....	39
2. The Hydrocarbons.....	40
E. City Gas.....	40
IV. General Problems.....	42
A. Synthesis Gas Production.....	42
B. Space-Time Yields and Apparatus Details.....	43
C. Pelleting of the Catalyst.....	45
D. Some Details on the Further Processing of the Primary Products.....	46
Conclusion.....	49
Literature.....	51
TGM Reel 101 Doc. RG-21574-NID, "Lecture and Discussion on Iron Catalysts for the Middle-Pressure Synthesis, by Dr. H. Fichler With a Preface by Director Franz Fischer, September 9, 1940"....	
	1
Introduction by Franz Fischer.....	1
I. Introduction.....	2
II. The Catalyst.....	4
A. Precipitation of the Catalyst.....	4

	<u>Page</u>
B. Pretreatment of the Catalyst.....	4
1. Induction with Mixtures of CO and H <sub>2</sub> During the Synthesis.....	5
a. Experiments at atmospheric pressure.....	5
b. CO-rich gas and elevated pressure.....	6
2. Induction of the Catalyst By a Separate Pro- cess Preceding the Actual Synthesis.....	7
a. Induction at ordinary pressure and synthe- sis at higher pressure.....	7
b. Induction at different pressures and syn- thesis at ordinary pressure.....	7
c. Influence of the induction temperature upon the progress of the synthesis.....	8
3. The Influence of the Induction Upon the Synthe- sis Temperature.....	8
a. Time of induction.....	9
III. The Synthesis.....	10
A. The Synthesis Gas.....	10
B. The Synthesis Pressure.....	11
C. The Reaction Temperature.....	12
D. The Influence of the Alkali Contents on the Iron Catalysts.....	13
E. Treatment of the Catalyst with Hydrogen.....	15
F. The Effect of Addition of Kieselguhr.....	16
G. The Construction of the Apparatus.....	16
IV. The Products of Reaction.....	16
A. Liquid Hydrocarbons.....	16
B. Paraffin.....	17
C. Gasol.....	18
D. Oxygen-containing Products.....	19
E. City Gas.....	19

	<u>Page</u>
V. Conclusion.....	19
Literature.....	21
TOM Reel 101 Doc. PG-21581-MID, "Recent Investigations on Iron Catalysts".....	1
I. Introduction.....	1
II. Iron-Copper Catalysts from Ferrous Compounds.....	2
A. Solution of Iron-Metal in Formic Acid and Precipitation with Sodium Bicarbonate.....	2
B. Precipitation from Salts with Sodium Bicarbonate without Alkalinization Thereafter.....	3
C. Influence of a Separate $K_2CO_3$ Addition.....	5
D. Effect of Mode of Alkalinization Upon the Reaction.....	9
E. Influence of Form of Catalyst.....	9
F. Influence of $Na_2CO_3$ Addition.....	10
G. Influence of Copper Content.....	11
III. Iron-Copper 3-Component Catalysts Prepared from Ferric Compounds.....	12
A. Fe-Cu-MnO Catalysts.....	12
1. Thermal Decomposition of the Nitrates.....	12
2. Precipitation with Alkalis.....	13
a. Precipitation with NaOH, (KOH and $NH_3$ ).....	14
b. Precipitation with $Na_2CO_3$ ( $K_2CO_3$ , $(NH_4)_2CO_3$ )..	17
3. Variation of the Copper and Manganese Contents in the Fe-Cu-MnO Catalysts.....	19
4. Significance of Alkali Addition to the Fe-Cu-MnO Catalysts.....	20
B. Fe-Cu With Zn, Cr, Al, and Sn Catalysts.....	21
C. Catalysts of Special Composition.....	22
IV. Needle-Iron Ore Catalysts.....	23
A. Preparation of the Synthetic Needle Iron Ore ( $\alpha Fe_2O_3 \cdot 1H_2O$ ).....	23

	<u>Page</u>
1. Results of Experiments.....	23
B. Simplified Preparation of Needle Iron Ore.....	26
V. Influence of Pretreatment of Iron Catalysts.....	29
A. Influence of CO Pretreatment.....	29
1. Influence of CO Induction at Synthesis Temperature	29
2. Influence of CO Pretreatment at Higher-Than-Synthe- sis Temperature.....	30
B. Pretreatment with Mixed Gas at Higher Temperatures....	32
C. Influence of H <sub>2</sub> Pretreatment.....	32
1. Hydrogen Treatment at Reaction Temperature.....	33
2. Hydrogen Treatment at High Temperatures.....	33
VI. Influence of Carriers.....	33
A. Fe-Cu-Carrier Catalysts from Ferrous Salts.....	34
B. Fe-Cu-MnO-Carrier Catalysts from Ferric Salts.....	37
C. Carrier-plus-Decomposed Nitrates Catalysts.....	37
D. Carrier-plus-Precipitated Catalysts.....	38
E. Preparation of Some Fe-Cu-MnO-Kieselguhr Catalysts....	39
1. 1(4Fe-1Cu-1MnO):1 Kieselguhr Catalyst.....	39
2. 1(4Fe-1Cu-1MnO):0.5 Kieselguhr Catalyst.....	40
3. 1(4Fe-1Cu-1MnO):2 Kieselguhr Catalyst.....	40
4. 1(4Fe-1Cu-1MnO):3 Kieselguhr Catalyst.....	41
5. 1(4Fe-1Cu-1MnO):4 Kieselguhr Catalyst.....	41
F. General Considerations on the Kieselguhr Precipitated Catalysts.....	42
VII. Course of the Reaction with the Iron Catalyst.....	43
VIII. Experiments on Water Formation.....	46
A. Influence of Gas Composition (CO to H <sub>2</sub> Ratio) Upon the CO <sub>2</sub> and H <sub>2</sub> O Formation.....	47

	<u>Page</u>
1. Experiments with Mixed Gas ( $\text{CO}:\text{H}_2 = 1:1.9$ ).....	47
2. Experiments with $\text{H}_2$ -Rich Gas.....	50
3. Experiments with CO-Deficient Gas.....	52
B. Influence of Alkali Contents.....	53
C. Experiments Using a $\text{CO}_2$ -Rich Starting Gas.....	54
D. Water and $\text{CO}_2$ Formation on Iron-Carrier Catalysts.....	55
1. Experiments with Fe-Cu-MnO-Kieselguhr Catalysts...	56
2. "Three-Layer Experiment" with Fe-Kieselguhr Catalysts.....	60
3. Experiments with Tonall as Carrier.....	62
IX. Best Catalyst Developed.....	65
X. Regeneration of Catalyst.....	66
A. Regeneration of Fe-Cu Catalysts.....	67
B. Regeneration of Cu-Free Catalysts.....	68
XI. Regeneration of the Exit Gases.....	68
A. Use of Coke at High Temperature.....	69
B. Use of Coke at High Temperature in the Presence of Illuminating Gas.....	69
C. Use of Coke at High Temperature in the Presence of Broken Clay.....	70
XII. Two-Stage Experiments with Water-Gas and Mixed Gas on Iron-Copper Catalysts.....	70
A. Water-Gas Experiment.....	70
B. Mixed Gas Experiments.....	72
1. Without Regeneration of the End-Gas After the First Stage.....	72
2. With Regeneration of the End-Gas After the First Stage.....	72
C. Two-Stage Experiment With Water-Gas.....	74

<b>XIII. Importance of the Iron Catalysts for the Simultaneous Production of CO-Deficient City Gas and Benzine in Gas Works.....</b>	76
<b>XIV. Reduction of the CO<sub>2</sub> On Iron Catalysts.....</b>	79
<b>IV. Copper-Free Iron Catalysts.....</b>	80
<b>A. Preliminary Experiments.....</b>	81
<b>B. Principal Experiment.....</b>	83
<b>1. Dumped Weight and Mode of Preparation.....</b>	83
a. Precipitation.....	83
b. Precipitations with soda.....	83
c. Precipitations with potash.....	85
d. Precipitations with sodium hydroxide.....	85
<b>2. Catalytic Investigations of Catalysts With Various Dumped Weights.....</b>	86
<b>3. Determination of the Alkali Quantity Needed for Alkalinization.....</b>	87
a. Estimation of alkali quantity according to chlorine contents.....	87
b. Excess alkalinization and removal of unadsorbed alkali quantities by suction and washing, respectively.....	88
c. Precipitation in the presence of fixed alkali.	88
d. Exhaustive washing of the ferric nitrate catalysts precipitated with soda.....	89
<b>4. Most Effective Iron One-Component Catalyst.....</b>	89
a. Method of preparation.....	89
b. Alkalinization and catalytic activity.....	89
c. Catalytic activity during life-tests.....	90
d. Palleting and catalytic activity.....	91
e. Conversion of CO with water vapor at synthesis temperature.....	91

<u>Figure</u>		<u>Following Page</u>
<u>TOM Reel 101 Dec. FG-21559-MID</u>		
1	Experiments at atmospheric pressure. (Decrease of contraction with duration of operation when various CO-H <sub>2</sub> mixtures are employed.).....	5
2	Influence of induction temperatures of the catalyst upon the course of the synthesis. (Decrease of contraction with time of operation at 15 atmospheres and 235°C.) Induction was carried out with a CO-rich synthesis gas at 1/10 atmosphere.....	9
3	Influence of the induction temperature upon the course of the synthesis after an induction with CO at 1/10 atmosphere pressure.....	11
4	CO <sub>2</sub> formation during the induction process.....	14
5	Equilibrium conditions for the system Fe-C-O.....	16
6	Water formation at various pressures (Synthesis gas composition: CO:H <sub>2</sub> = 1).....	18
7	Conversion of the CO-oxygen to CO <sub>2</sub> and H <sub>2</sub> O, respectively, for various synthesis gas compositions at 0 and 15 atmospheres pressure.....	18
8	Influence of synthesis gas composition upon the yields.....	18
9	Influence of induction upon the synthesis temperature.....	24
10	Influence of a H <sub>2</sub> -pretreatment on the synthesis.....	29
11	Experiments with iron-kieselguhr catalysts in vertical units.....	34
12	Products recovered from active charcoal trap by steam distillation.....	36
13	Engler-distillation of a benzine fraction.....	36

<u>Figure</u>		<u>Following Page</u>
14	Distillation of gaseous hydrocarbons.....	38
15	Removal of C <sub>4</sub> -hydrocarbons from benzine.....	38
16	Boiling point analyses of the reaction water boiling below 90°C. (charge 15 cc.).....	39
17	Distillation of water-soluble constituents of the liquid reaction products (charge 15 cc.).....	40
18	Missing.....	-
19	Schematic representation of positions of reaction tubes.....	43
20	Relationship between reaction temperature and gas throughput (for constant 50 percent conversion)..	44
