

### LIST OF FIGURES

	<u>Facing</u> <u>Page</u>
Fig. 1 - General View of a Brabag plant, believed to be Zeitz; (from Oel u. Kohle)	6
Fig. 2 - View of two generators at Zeitz; (photographed by C.I.O.S. investigators)	6
Fig. 3 - View of Waste Heat Boilers and Multicyclones at Zeitz; (photographed by C.I.O.S. investigators)	6
Fig. 4 - View of lower portions of generator at Böhlen; (photographed by C.I.O.S. investigators)	6
Fig. 5 - Sketch of typical installation.	6
Fig. 6 - Arrangement of early generator, with travelling grate	8
Fig. 7 - Arrangement of early Leuna generator, with bulbous top.	8
Fig. 8 - Sketch of grate bars; (from Ref.10)	8
Fig. 9 - Progress of oxygen break through (from Ref.6)	8
Figs. 10A and 10B - Designs of water-cooled nozzles (from Ref.10)	8
Fig. 11 - Typical arrangement of waste heat boiler	14

### Units of Gas Measurements

-Throughout this report gas quantities are quoted in  $N_m^3$ , measured dry at 15°C and 735.5 mm mercury; this is the normal practice at I.G. and BRABAG factories.
