UNITED STATES DEPARTMENT OF THE INTERIOR

Oscar L. Chapman, Secretary

BUREAU OF MINES

James Boyd, Director

Work on manuscript completed December 1949. The Bureau of Mines will welcome reprinting of this paper, provided the following footnote acknowledgment is made: "Reprinted from Bureau of Mines Report of Investigations 4651."

February 1950

SYNTHETIC LIQUID FUELS

Annual Report of the Secretary of the Interior for 1949

Part I. - Oil from Coal

PREFACE

This report is submitted in accordance with the provisions of the Synthetic Liquid Fuels Act of April 5, 1944 (30 U.S.C. 321-325), as amended, which require that: "The Secretary of the Interior shall render to Congress on or before the first day of January of each year a report on all operations under this Act."

Owing to the broad scope of the content and the diversity of interests represented, the Annual Report for 1949 has been divided into four separate publications. Each has been published by the Bureau of Mines as a Report of Investigations, and the respective titles follow:

R. I. 4651, Part I - Oil from Coal.

R. I. 4652, Part II - Oil from Oil Shale.

R. I. 4653, Part III - Liquid Fuels from Agricultural Residues.

R. I. 4654, Part IV - Oil from Secondary Recovery and Refining.

Identical in each report, the introduction summarizes research progress and commercial-plant cost estimates made in 1949 under the entire Synthetic Liquid Fuels Program.

A free copy of any of these publications may be obtained by a written request to the Bureau of Mines, Publications Distribution Section, 4800 Forbes Street, Pittsburgh 13, Pa. The R. I. number and title of the publication desired should be indicated.

Preface	1
Introduction.....	1
PART I	
Processing, Coal-to-Oil Demonstration Plants, Louisiana, Mo.	1
Coal-Hydrogenation Demonstration Plant.....	1
Test operations.....	1
First liquid-phase run with coal.....	8
Gas-Synthesis Demonstration Plant.....	9
Oxygen Plant.....	9
Construction and testing.....	10
Operations, mechanical aspects.....	10
Gasification unit.....	10
Engineering, construction and testing.....	11
Operations, mechanical aspects.....	11
Operations, process aspects.....	14
Future work.....	14
Gas-purification unit.....	14
Synthesis and distillation units.....	14
Design.....	15
Construction.....	15
Engineering studies and operating procedures.....	17
Engineering studies and cost estimates for commercial-size plants...	17
Hydrogenation of petroleum residuum.....	18
Cost of liquid-fuel products from coal hydrogenation.....	18
City gas as a byproduct from synthetic fuels plants.....	20
Alaska coal-to-oil plant.....	20
Cost of purified 700-atm. hydrogen.....	21
Submerged coastal land drilling vs. synthetic fuels.....	21
Shale-oil hydrogenation.....	21
Chemicals as byproducts from hydrogenation.....	22
Data for Corps of Engineers.....	22
Equipment for commercial-scale hydrogenation-plant use.....	22
Design and cost estimates for a (10,000-barrel-per-day) gasifi- cation and synthesis plant.....	23
Indexing Technical Oil Mission microfilm reels.....	24
General.....	24
Research and Development Coal-to-Oil Laboratories and Pilot Plants, Bruceton and Pittsburgh, Pa.	27
Synthesis of liquid fuels from hydrogen and carbon monoxide.....	27
Process development.....	27
Pilot-plant operations.....	27
Laboratory-scale experiments.....	28
Catalysts.....	28
Catalyst reduction.....	30
Refining of Fischer-Tropsch gasoline.....	30
Heat transfer in fluidized catalyst beds and pressure drop in granular beds.....	30

CONTENTS (Cont'd.)

	<u>Page</u>
The OXO reaction: Homologation of alcohols.....	30
Iron catalysts and Fischer-Tropsch synthesis.....	31
Nitrided catalysts.....	31
Carbided catalysts.....	32
Free-carbon deposition.....	32
Hydrogenation.....	33
Surface area, porosity, and synthesis-rate studies.....	33
Effect of chloride ion.....	33
Analysis of the products from the hydrogenation of carbon monoxide.....	34
Synthesis of liquid fuels by hydrogenation of coal.....	35
Process development.....	35
Pilot-plant operations.....	35
Laboratory-scale experiments.....	35
Basic laboratory research.....	36
Reaction mechanism.....	36
Catalysts for coal hydrogenation.....	37
Effect of physical distribution.....	38
Analysis of coal-hydrogenation products.....	38
Gasification of coal.....	39
Vortex combustion studies for powdered-coal gasification...	39
Oxygen production by multistage fractional permeation.....	40
Technical reports and foreign documents.....	41
Synthetic liquid fuels abstracts.....	41
Bibliographics.....	41
Foreign documents.....	41
Research and development, Synthesis-Gas Laboratories and Pilot Plants, Morgantown, W. Va., and Gorgas, Ala.	43
Experimental work on synthesis-gas production.....	43
Underground gasification project, Gorgas, Ala.	43
Pulverized-coal-gasification pilot plant, Morgantown, W. Va.	49
Fluidized coal-feeding unit.....	51
Safety and control devices.....	51
Electronic method for measuring ratio of solid to gas in flow.....	52
Description of circuit.....	52
Calibration of instrument with coal.....	53
Use of instrument.....	54
Engineering and design work.....	54
Pressure gasification.....	54
Atmospheric gasification.....	55
Miscellaneous.....	55
Gas treating and testing.....	56
Analytical work.....	56
Bench-scale purification experiments.....	56
Purification pilot plant.....	57
Laboratory-scale powdered-coal gasification.....	57
Appendix. Bibliography of papers published and presented in 1949.	59

ILLUSTRATIONS

Follows

page

<u>Fig.</u>		
1.	Fueling Diesel locomotive of eight-car dedication train	xxii
2.	Process-flow diagram of Coal-hydrogenation Demonstration Plant...	xxii
3.	A portion of the Hydrogenation Demonstration Plant's pipe mani-folding near the control house with distillation area in background.....	xxii
4.	Pumps in distillation pump house.....	xxii
5.	Rear view of high-pressure stalls; left three are liquid-phase, right three vapor-phase.....	2
6.	High-pressure area with control house, protective stall structure, and pipeways.....	2
7.	Interior of high-pressure control house, showing liquid-phase instruments.....	2
8.	Vapor-phase instruments in high-pressure control house.....	2
9.	Photomicrographs of unused and used tubing and photograph of ruptured tubing.....	4
10.	Cartridge-type chamber for paste injection pump.....	4
11.	Motor- and turbine-driven hydrogen recycle booster compressors...	6
12.	Raw coal enters through the coal-preparation plant at right, and is conveyed to paste-preparation plant at left, where it is mixed with heavy oil and catalyst.....	8
13.	Inside heavy oil pump house.....	8
14.	Flesh distillation plant.....	9
15.	Process-flow diagram of Gas-Synthesis Demonstration Plant.....	9
16.	Perspective sketch of Bureau of Mines Gas-Synthesis Demonstration Plant now under construction at Louisiana, Mo.	9
17.	Interior of oxygen plant during operation.....	8
18.	Instrument and control panel of coal-gasification unit.....	10
19.	Effect of oxygen: coal ratio on carbon conversion.....	12
20.	Compressor building, Gas-Synthesis Demonstration Plant, during construction.....	14
21.	Perspective view of catalyst reduction unit.....	14
22.	Tank-farm construction, with gasifier at right beyond railroad cars, oxygen plant in upper center, and synthesis and distillation structures in left background.....	16
23.	Flow sheet and material balance of residual-oil hydrogenation plants.....	18
24.	Cost of byproduct city gas from synthetic liquid fuels plants vs. cost of coal at plant site.....	18
25.	Process units in synthetic liquid fuels plants making byproduct city gas.....	18
26.	Flow sheet for 10,000-barrel-per-day coal-to-oil plant using Alaska subbituminous coal.....	20
27.	Flow sheet and material balance for 34,000-barrel-per day shale-oil hydrogenation plant.....	20
28.	Comparison of standards for high-pressure tubing.....	22
29.	Full-scale plant converter.....	22
30.	Calculated temperature conditions in a four-pass preheater with incrusted tubes when heating 38,500 lb. per hour of gas and paste to 800° F. with maximum allowable skin temperature 1,000° F.	22

Figs.

31. Calculated temperature conditions in a four-pass paste preheater with clear tubes when making 20,183 lb. per hr. of gas and paste to 815° F., with maximum allowable skin temperature of 1,000° F.	22
32. Process-flow block diagram of gasification and synthesis plant based upon a stream day.....	22
33. Static-bed slurry unit for hydrocarbon synthesis.....	28
34. Product-reforming unit for upgrading gasoline.....	30
35. Magnetic balance.....	32
36. Magnetic balance.....	32
37. Apparatus for studies of hydrocarbon synthesis mechanism.....	32
38. X-ray diffraction equipment.....	34
39. Infrared (foreground) and ultraviolet (background) spectrophotometers.....	34
40. Distillation laboratory - controls and supplementary equipment...	34
41. Distillation laboratory - column assemblies.....	34
42. Distillation laboratory - column assemblies.....	34
43. Small mass spectrometer.....	34
44. Variable-contact-time unit for coal hydrogenation.....	34
45. Batch autoclave experiments; weighing autoclave and contents.....	36
46. Synthesizing organic compounds.....	38
47. Apparatus for precise determination of freezing point of organic compounds.....	38
48. Flow sheet of vortex gasifier.....	38
49. Vortex reaction chamber.....	38
50. Foreign documents section - print files.....	40
51. Foreign documents section - card index.....	40
52. Site of second experiment in underground gasification of coal.....	41
53. Twenty-inch air manifold, looking south from bore hole IV in foreground.....	44
54. Air manifold, flowrator, air receivers, and compressor house....	44
55. Eight hundred - hp. reciprocating compressor (7,200 c.f.m. free air, 30 p.s.i.g. discharge).....	44
56. Smoke and steam issuing from stack at bore hole II, 10 minutes after firing project on March 18, 1949.....	44
57. Producer-gas-flame cone at stack II after product gas has ignited	44
58. Flow sheet of superheated-process steam generation.....	50
59. Flow sheet of dust-removal and cooling system.....	50
60. Dust-removal and gas-metering equipment, pulverized-coal gasification pilot plant, September 1949.....	50
61. Fluidized-coal feeder unit.....	52
62. Arrangement of safety devices.....	52
63. Simplified circuit diagram.....	52
64. Circuit diagram of oscillator unit.....	52
65. Coal condenser.....	52
66. Diagram of test equipment.....	52
67. Test equipment.....	52
68. Effect of volumetric percent of coal in coal-air mixture on dielectric constant of mixture.....	52

ILLUSTRATIONS (Cont'd.)

Follows
page

2.	Effect of volumetric fraction of coal in coal-air mixture on oscilloscope deflection.....	52
3.	Oscilloscope photographs, showing effect of inlet shield on uniformity of flow.....	54
4.	Fluidizer used in simultaneous catalytic removal of hydrogen sulfide and organic sulfur.....	56
5.	View of top section of moving-bed filter used in removing dust from gas.....	56
6.	Bottom section of moving-bed filter.....	56
7.	Bench-scale apparatus for reverse-shift-reaction tests.....	56
8.	Gas-purification pilot plant.....	56
9.	Flow diagram of pneumatic feeding system and generator in latest stage of development for powdered-fuel gasification in laboratory-scale pilot unit.....	56
10.	Flow diagram of generator and synthesis-gas-purification train in latest stage of development for powdered-fuel gasification in laboratory-scale pilot unit.....	58
11.	Laboratory-scale pilot unit (upper floor) for powdered-fuel gasification in latest stage of development,.....	58
12.	Laboratory-scale pilot unit (lower floor) for powdered-fuel gasification in latest stage of development.....	58
13.	Silicon carbide generator lining, originally 1 inch thick and 6 inches I. D., before and after 114 days of equivalent continuous use.....	58
14.	Electron micrograph of extremely fine carbonaceous residue at high magnification (45,000 \times) collected in an Aerotec tube of laboratory-scale pilot unit for powdered-coal gasification.....	58

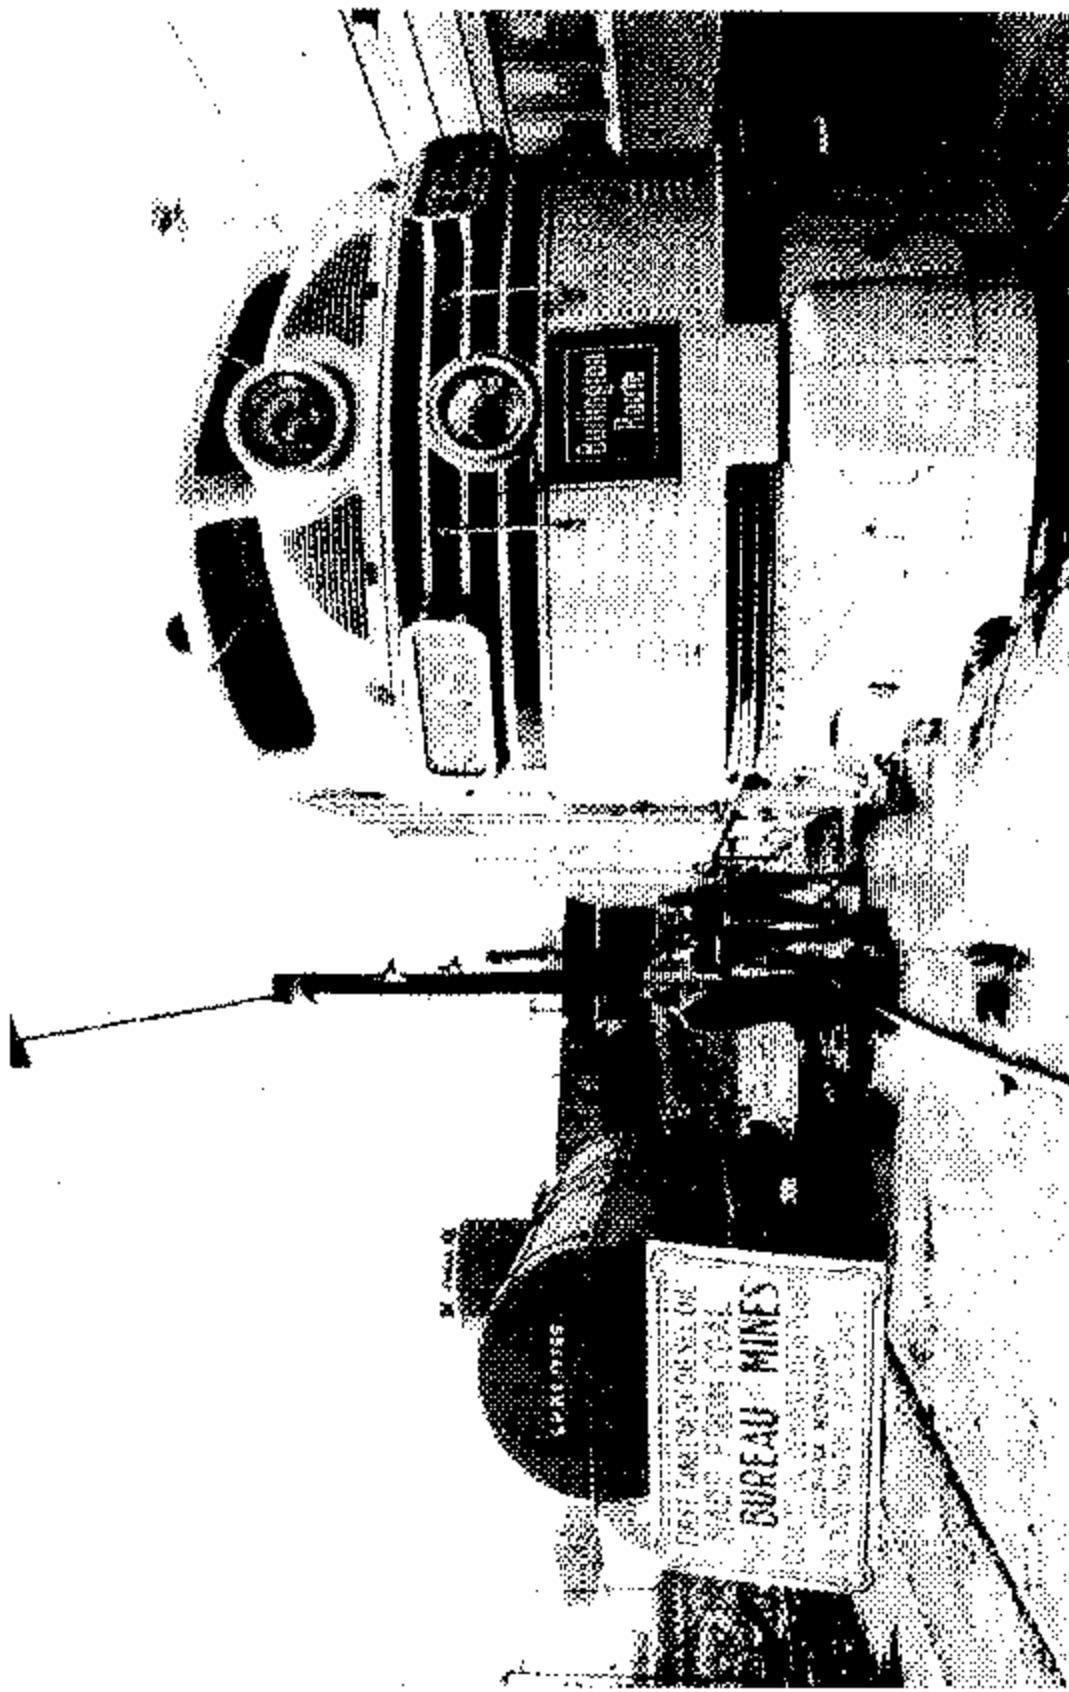

Figure 1. - Fueling Diesel locomotive of eight-car dedication train, the first ever operated in the United States on oil made from coal. Standing, left to right, are James Boyd, Director of the Bureau of Mines; Ralph Budd, retired president of the Burlington Railroad; and O. C. Moore, general foreman of the Burlington coach yards at St. Louis, Mo.
