Abstract.....	1
Introduction.....	1
Interpretation of kinetic experiments in a flow system.....	3
Experimental.....	4
Apparatus.....	4
Catalyst composition and pretreatment.....	5
Synthesis tests.....	5
Kinetics of the Fischer-Tropsch synthesis on iron catalysts.....	6
Effect of space velocity, feed composition, and temperature.....	6
Pressure dependence of rate.....	11
Effect of variables of operation on selectivity.....	13
Effect of water vapor, carbon dioxide, ethane, and argon on rate.....	19
A semifundamental rate equation for the Fischer-Tropsch synthesis on iron catalysts.....	25
Rate as a function of catalyst geometry.....	29
Effect of particle size, temperature of reduction, and extent of reduction.....	29
Application of a modified Wheeler equation.....	35
List of references.....	41
Appendix.—Synthesis tests on iron catalysts at pressures up to 103 atmospheres.....	43

ILLUSTRATIONS

Fig.	Page
1. Water feed system.....	5
2. Evaluation of data for $1\text{H}_2 + 1\text{CO}$ feed gas at 240°C , reduced catalyst.....	7
3. Evaluation of data for $2\text{H}_2 + 1\text{CO}$ feed gas at 240°C , nitrated catalyst.....	8
4. Evaluation of data for $1\text{H}_2 + 1\text{CO}$ feed gas at 240°C , nitrated catalyst.....	9
5. Logarithmic plot of rate data for nitrated catalysts.....	10
6. Data for nitrated catalysts at 240°C according to empirical equation.....	12
7. Plots of equation (10) for reduced catalysts.....	13
8. Plots of first order empirical equation for nitrated catalyst D3001 at 240°C with $1\text{H}_2 + 1\text{CO}$ gas.....	14
9. Logarithmic plots of $(xS)_x$ against operating pressure for tests with $1\text{H}_2 + 1\text{CO}$ at 240°C	15
10. Logarithmic plots of differential reaction rate r as a function of partial pressure of $\text{H}_2 + \text{CO}$ at 240°C	15
11. Relative usage of hydrogen as a function of conversion for nitrated catalyst D3001 at 21.4 atmospheres and 225°C	15
12. Methane production as a function of conversion for nitrated catalyst D3001 at 21.4 atmospheres and 225°C	16
13. Olefins in C_2 and C_3 fractions as a function of conversion for nitrated catalyst D3001 at 225°C and 21.4 atmospheres.....	16
14. Selectivity as a function of feed gas composition, at 21.4 atmospheres and conversion of 30 percent.....	17
15. Relative usage of hydrogen as a function of conversion and operating pressure.....	18
16. Contraction (CO_2 -free) during initial period of synthesis at 240°C and 21.4 atmospheres with $1\text{H}_2 + 1\text{CO}$	20
17. Kinetic data for synthesis on nitrated iron catalyst with $1\text{H}_2 + 1\text{CO}$ gas + 10 mole-percent H_2O at 21.4 atmospheres and 240°C	21
18. Kinetic data for synthesis on nitrated iron catalyst with $1\text{H}_2 + 1\text{CO}$ gas + 30 mole-percent H_2O at 21.4 atmospheres and 240°C	21
19. Double logarithmic plots of conversion of $\text{H}_2 + \text{CO}$ and CO as a function of reciprocal space velocity in H_2O addition tests with $1\text{H}_2 + 1\text{CO}$ at 21.4 atmospheres and 240°C	22
20. Relative usage of hydrogen as a function of conversion and added water at 21.4 atmospheres and 240°C	22
21. Production of CO_2 as a function of conversion and added water at 21.4 atmospheres and 240°C	23

Fig.	Page
22. Production of methane as a function of conversion and added water vapor at 240° C and 21.4 atmospheres.....	23
23. Double logarithmic plots of activity against partial pressure of $1\text{H}_2 + 1\text{CO}$ in feed in dilution tests.....	24
24. Differential reaction rates obtained by numerical differentiation.....	27
25. Plots of equation (29) for nitrided fused iron catalyst D3001 at 21.4 atmospheres.....	28
26. Variation of activity with particle size.....	31
27. Log-log plot of data for reduced and reduced-and-nitrided catalysts in particle size series.....	33
28. Schematic representation of a pore in a Fischer-Tropsch catalyst.....	34
29. Changes in catalyst composition in 6 weeks of synthesis expressed as change of atom ratios to iron of oxygen, carbon, and nitrogen.....	35
30. Idealized representation of partly reduced particle of catalyst.....	36
31. Logarithmic plots of equation (34).....	37
32. Data for particle size series superimposed on curves of figure 31.....	38
33. Data for extent of reduction series superimposed on curves of figure 31.....	39
34. Log-log plots of pressure dependence of synthesis on nitrided iron catalysts at high pressure.....	45
35. Distribution of hydrocarbons from synthesis with nitrided D3001 at high pressures.....	45

TABLES

1. Basic data as computed from gas flows and compositions. Nitrided catalysts with $1\text{H}_2 + 1\text{CO}$ gas at 240° C.....	6
2. Values of initial reaction rate, r_0	10
3. Activation energies from ratios of αS values at constant values of α for nitrided-iron catalysts.....	11
4. Comparison of results of iron and cobalt catalysts.....	19
5. Initial reaction rate as a function of water added to feed.....	21
6. Constants of equation (29) for synthesis on nitrided fused iron catalyst D3001 at 21.4 atmospheres.....	26
7. Variation of activity with particle size.....	30
8. Variation of activity with extent of reduction.....	32
9. Variation of activity with temperature of reduction.....	32
10. Activation energies as a function of particle size for nitrided iron catalysts.....	37
11. Values of k and D	38
12. Values of $\gamma = D/\bar{r}$	39
A-1. Fischer-Tropsch synthesis with nitrided iron catalyst D3001 at high pressures.....	43
A-2. Fischer-Tropsch synthesis with nitrided iron catalyst D3008 at high pressures.....	44
A-3. Fischer-Tropsch synthesis with reduced iron catalyst D3001 at high pressures.....	44
