Review of literature—Con.		Bureau of Mines, etc.—Con.	
Properties of Fischer-Tropsch synthesis products—Con.		Effect of variations, etc.—Con.	
Secondary products.....	59	Nickel and cobalt, etc.—Con.	
Gasol.....	59	Later tests on promoted cobalt catalysts: Reproducibility of catalyst preparations and tests, comparison of 30- and 90-cm. catalyst depths, effect of different induction procedures, efficiencies of different kieselguhrs as carriers, space-time yield at different space velocities, and variation of reaction temperature with flow at constant contraction.....	112
Gasoline.....	59	Characteristics of products from cobalt catalysts.....	129
Refining of primary gasoline.....	59	Correlation of physical properties of catalysts with their activity.....	131
Cracking of primary liquid products.....	60	X-ray diffraction patterns and magnetic properties of iron catalysts.....	131
Storage tests.....	61	Introduction.....	131
Determination of octane number.....	62	Experimental methods.....	132
Lubricating oil.....	62	X-ray diffraction studies.....	132
Fatty acids and related products.....	65	Magnetic studies.....	132
Miscellaneous products.....	67	Ferric oxides and ferric oxide hydrates.....	137
Fischer-Tropsch cost estimates.	68	X-ray diffraction studies of unpromoted iron catalysts.....	144
Bureau of Mines research on effect of catalyst preparation, reduction, and induction procedures on activity.....	71	Magnetic studies of unpromoted iron catalysts.....	151
Catalyst-testing experiments.....	71	Magnetic and X-ray diffraction studies of promoted iron catalysts.....	156
Introduction and summary.....	71	Surface properties of Fischer-Tropsch catalysts.....	158
Preparation of catalyst.....	75	Cobalt Fischer-Tropsch catalysts.....	159
Description of apparatus.....	77	Iron Fischer-Tropsch catalysts.....	171
Synthesis-gas manufacture.....	88	Appendix on preparation of catalysts.....	173
Conditioning procedures.....	88	Preparation of unpromoted iron catalysts.....	173
Reactivation procedures.....	90	Preparation of No. 10 catalysts.....	174
Effect of variations in methods of catalyst preparation, reduction, induction, and synthesis conditions on activity and durability.....	91	Preparation of No. 47 catalysts.....	175
Iron catalysts.....	91	Preparation of No. 50 catalysts.....	175
Deleterious effect of chlorides on unpromoted iron catalysts prepared from ferric salts.....	97	Preparation of No. 68 catalysts.....	176
Effect of alkali on activity of unpromoted iron catalysts.....	97	Preparation of other unpromoted iron catalysts.....	177
Effect of conditions of precipitation of active unpromoted iron catalysts.....	98		
Effect of different induction procedures and operating pressures for unpromoted iron catalysts.....	98		
Tests on promoted iron catalysts.....	103		
Nickel and cobalt catalysts.....	108		
Preliminary tests using Hyflo Super-Cel as carrier; durability test at 100 p. s. i. and effect of nitrogen in the synthesis gas.....	108

ILLUSTRATIONS

Fig.		
1.	100- to 150-pound per square inch Fischer-Tropsch tube.....	16
2.	Normal-pressure Fischer-Tropsch tube.....	17
3.	Yield and character of products at 180° C. and various pressures.....	44
4.	Intermediate-pressure synthesis yields and carbon balance versus throughput.....	46
5.	Single-tube converter (modified Downs type) January 1944.....	73
6.	Flow diagram for first series of catalyst tests.....	74
7.	Product recovery system in first series of catalyst tests.....	74
8.	Flow diagram for "X" series of catalyst tests.....	75
9.	Recovery of products in "X" series of catalyst tests.....	75
10.	Charcoal trap for "X" series of catalyst tests.....	76
11.	Pressure controller for liquid-vapor bath in "X" series of catalyst tests.....	76
12.	Assembly of 12 laboratory-scale Fischer-Tropsch units.....	77
13.	Assembly of 12 laboratory-scale Fischer-Tropsch units; flow meters and flow recorders in foreground.....	78
14.	Assembly of 12 laboratory-scale Fischer-Tropsch units; rear view, showing end-gas meters.....	79
15.	Vertical temperature gradient in 30-centimeter catalyst bed.....	80
16.	Vertical temperature gradient in 90-centimeter catalyst bed.....	87
17.	Reproducibility of catalyst preparations and tests.....	120
18.	Comparison of operations with 30-centimeter and 90-centimeter depths of catalyst.....	121
19.	Comparison of induction at atmospheric pressure with that at 100 p. s. i.....	121
20.	Comparison of two induction procedures.....	122
21.	Relative efficiency of Filter-Cel and Celite (Johns-Manville Co. H. S. C.).....	122
22.	Relative efficiency of Portuguese kieselguhr and Filter-Cel.....	123
23.	Relative activity of pellets (about 0.8 bulk density) and granules (about 0.3 bulk density).....	123
24.	Space-time yield at different space velocities for Co : ThO ₂ : MgO : kieselguhr at 185°—200° C.....	126
25.	Yield of oil per unit weight of catalyst per hour at different gas throughputs for Co : ThO ₂ : MgO : kieselguhr at 185°—200° C.....	127
26.	Variation of temperature with flow of 2H ₂ + 1 CO at constant contraction.....	128
27.	Temperature coefficient of synthesis on cobalt.....	129
28.	Magnetic balance, front view.....	133
29.	Magnetic balance, side view.....	134
30.	Relationship between field strength and magnetizing current, for magnetic balance.....	135
31.	X-ray diffraction patterns of some crystalline iron oxides and iron oxide hydrates.....	139
32.	Electron micrographs of ferric oxide hydrates.....	140
33.	X-ray diffraction patterns of unpromoted iron catalysts.....	142
34.	X-ray diffraction patterns of unpromoted iron catalysts.....	143
35.	X-ray diffraction patterns of unpromoted iron catalysts.....	144
36.	X-ray diffraction patterns of unpromoted iron catalysts.....	145
37.	Electron micrographs of unreduced-iron catalysts.....	146
38.	X-ray diffraction powder patterns of various iron Fischer-Tropsch catalysts and the crystalline ferric oxides and ferric oxide hydrates.....	147

Fig.		Page
39.	Thermomagnetic curve for an iron Fischer-Tropsch catalyst.....	155
40.	X-ray diffraction patterns of promoted iron catalysts.....	157
41.	Electronmicrographs of kieselguhrs and a Fischer catalyst.....	160
42.	X-ray diffraction patterns of various kieselguhrs, quartz, and cristobalite.....	162
43.	X-ray diffraction analysis of various diatomaceous earths.....	163
44.	Sorption of nitrogen and carbon monoxide at -195° C. on reduced, pelleted catalysts 89H and 89J and reduced cobalt oxide powder....	166
45.	Adsorption of nitrogen at -195° C. on unreduced- and reduced-cobalt catalyst 89J.....	167
46.	Variation of activity of reduced-cobalt catalysts of the 89-series with surface areas of the unreduced catalysts.....	170
47.	Adsorption of nitrogen on unreduced- and reduced-iron catalysts at -195° C.....	171
