This work was performed at Ames Laboratory under Contract No. W-7405-Eng-82 with the U.S. Department of Energy. The United States government has assigned the DOE Report number IS-T 1862 to this thesis.

ACKNOWLEDGMENTS

For his support and guidance during both undergraduate and graduate studies, the author gratefully acknowledges Dr. Terry S. King. Special thanks to committee members Dr. L. K. Doraiswamy and Dr. Richard C. Seagrave from the Department of Chemical Engineering, and Dr. Marc D. Porter and Dr. Pat A. Thiel from the Department of Chemistry, for their input and constructive criticisms. Also vital to the completion of this project were present and past research group members Dr. Naresh Kumar, Dr. R. Lakshmi Narayan and Dr. Nilesh Savargaonkar for sharing their experiences and insight, Dr. Marek Pruski of Ames Laboratory for his ^1H -NMR expertise, and Eric Lee of Ames Laboratory for his assistance with the NMR instrumentation. None of this work could have been completed without the support of the United States Department of Energy Ames Laboratory, the National Science Foundation, Iowa State University and the Department of Chemical Engineering, and the national and state legislators who recognize the important role our government plays in supporting fundamental scientific research. Funding for this project was provided by the United States Department of Energy Office of Basic Energy Sciences, Division of Chemical Sciences under contract W-7405-ENG-82 and by the National Science Foundation through Engineering Research Equipment Grant CBT-8507418.

BIOGRAPHICAL SKETCH

David VanderWiel was born on April 12, 1970 in Sioux City, Iowa. He earned the Bachelor of Science in Chemical Engineering in 1993 from Iowa State University, where he was awarded the Doctor of Philosophy in Chemical Engineering in 1998. While at Iowa State, he was awarded a Graduate College Scholarship and worked as a research associate through the United States Department of Energy's Ames Laboratory. He worked as a co-op engineer for Quantum Chemical Corporation during his undergraduate studies, and after graduation he accepted a position as a research engineer for the Battelle Memorial Institute's Pacific Northwest National Laboratory.
