Tailored to Your Needs!

Selected Research In Microfiche

SRIM[®] is a tailored information service that delivers complete microfiche copies of government publications based on your needs, automatically, within a few weeks of announcement by NTIS.

SRIM[®] Saves You Time, Money, and Space!

Automatically, every two weeks, your SRIM[®] profile is run against all new publications received by NTIS and the publications microfiched for your order. Instead of paying approximately \$15-30 for each publication, you pay only \$2.50 for the microfiche version. Corporate and special libraries love the space-saving convenience of microfiche.

NTIS offers two options for SRIM[®] selection criteria:

Standard SRIM[®]—Choose from among 350 pre-chosen subject topics.

Custom SRIM[®]—For a one-time additional fee, an NTIS analyst can help you develop a keyword strategy to design your Custom SRIM[®] requirements. Custom SRIM[®] allows your SRIM[®] selection to be based upon *specific subject keywords*, not just broad subject topics. Call an NTIS subject specialist at (703) 605-6655 to help you create a profile that will retrieve only those technical reports of interest to you.

SRIM[®] requires an NTIS Deposit Account. The NTIS employee you speak to will help you set up this account if you don't already have one.

For additional information, call the NTIS Subscriptions Department at 1-800-363-2068 or (703) 605 6060. Or visit the NTIS Web site at <http://www.ntis.gov> and select SRIM[®] from the pull-down menu.

TABLE OF CONTENTS

	Page
List of Tables	vi
List of Figures	viii
Abstract	xvii
I. Objective and Scope of Work	1
II. Summary	3
III. Literature Review	11
IV. Task 2 - Bubble Column Reactor Design/Construction	21
A. Design and Selection of Gas Distributor	21
B. Description of Experimental Apparatus	24
V. Task 3 - Process Variable Studies	30
A. Description of the Flow Field	30
B. Average Gas Hold-up Measurements	48
B.1. Operating Procedure	48
B.2. Reproducibility and Effect of Operating Procedure	49
B.3. Effect of Temperature	68
B.4. Effect of Column Diameter	77
B.5. Effect of Distributor Type	85
B.6. Effect of Oxygenates	92
B.7. Effect of Liquid Medium	97
B.8. Comparison with Literature	110
C. Axial Gas Hold-up Measurements	117
C.1. Experimental Apparatus	117
C.2. Operating Procedure	119
C.3. Experimental Results	120

Preceding page blank

TABLE OF CONTENTS (contd.)

	Page
D. Bubble Size Distribution Measurements	134
D.1. Selection of Techniques	135
D.2. Bubble Size Distribution Using the Photographic Method	135
D.2a. Image Analysis	137
D.2b. Parameter Selection for Bubble Size Measurements	142
D.2c. Experimental Procedure	145
D.2d. Experimental Results	146
D.2e. Limitations of the Photographic Method	174
D.3. Bubble Size Distribution Using the Dynamic Gas Disengagement Method	175
D.3a. Theory	178
D.3b. Experimental Procedure	187
D.3c. Experimental Results	188
D.3d. Limitations of the DGD Technique	207
D.4. Comparison of Techniques Used to Measure Bubble Size Distributions	213
VI. Task 4 - Correlation Development and Data Reduction	218
A. Physical Property Measurements	218
B. Correlations for Average Gas Hold-up	223
C. Correlations for Specific Interfacial Area	242
VII. Nomenclature	254
VIII. References	258
IX. Acknowledgement	262
APPENDIX A - Summary of Experiments and Experimental Conditions	263
APPENDIX B - Estimation of Axial Hold-up from Differential Pressures	272

TABLE OF CONTENTS (contd.)

	Page
APPENDIX C - Development of Equations for DGD and Sample Calculations	278
APPENDIX D - Summary of Selected DGD Data	293
APPENDIX E - Hold-up Measurements with Composites of Mobil Reactor Waxes	300
